

Collapsible Gates

To ensure that you feel totally secure in without feeling imprisoned, our design team has used the thickest lattice available, in such a way, to allow our products to blend within your home or work environment. They are, therefore, unobtrusive and aesthetically appealing.

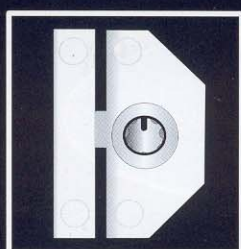

Side view of collapsible gate with a 'W' track for face and reveal fixing

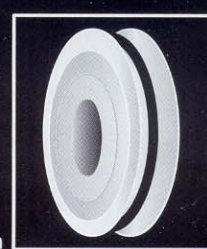

Side view of the collapsible gate with an alternative 'T' track

The 'W' track is manufactured from galvanised steel.
Dimensions: 52 mm x 32 mm x 1.8 mm.
Shown here are the face fixing holes and the security bolt that fastens the gate to the track.

The standard collapsible gate lock has a 7 pin tubular key.
To lock, simply push the barrel.

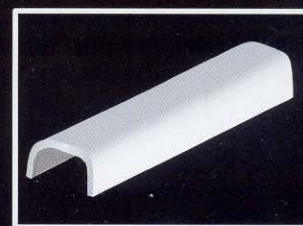

The wheel is manufactured from hard, durable plastic or alternatively cast alloy. It sits neatly on the tracks for a smooth operation when closing the gates.

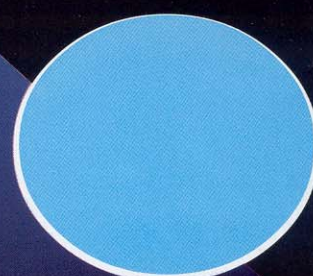

The 'Z' strip is an anti-jemmy strip, which is located on the reverse of the gate, to prevent a forced entry and is attached using heavy tubular rivets. Size 51mm x 3mm.

The lattice sections for pregalvanised and nongalvanised gates.
Dimensions:
Pregalv 16mm x 10mm x 2mm
Nongalv 16mm x 10mm x 1.5mm

The channel sections for pregalvanised and nongalvanised gates.
Dimensions:
Pregalv 16mm x 10mm x 3mm
Nongalv 16mm x 10mm x 2.5mm
